Full updated stories and key credit market metrics: July's investment-grade bond issuance will be well under its year earlier pace.

Credit
Spreads

Investment Grade: We see the year-end 2020's average investment grade bond spread above its recent 131 basis points. High Yield: Compared with a recent 582 bp, the high-yield spread may approximate 610 bp by year-end 2020.

Defaults

US HY default rate: According to Moody's Investors Service, the U.S.' trailing 12-month high-yield default rate jumped from June 2019's 3.3% to June 2020's 7.3% and may average 11.9% during 2020's final quarter.

Issuance

For 2019's offerings of US\$-denominated corporate bonds, IG bond issuance rose by 2.6% to \$1.309 trillion, while high-yield bond issuance surged by 55.8% to \$432 billion. In 2020, US\$-denominated corporate bond issuance is expected to soar higher by 40.8% for IG to \$1.843 trillion, while high-yield supply may rise by 6.5% to \$461 billion.

Credit Markets Review and Outlook

Credit Markets Review and Outlook

By John Lonski, Chief Economist, Moody's Capital Markets Research, Inc.

Ultra-Low Bond Yields Buoy Corporate Borrowing

The incredible rally in corporate credit continues. On Wednesday, the Bloomberg/Barclays corporate bond yields fell to a record low of 1.90% for investment-grade and a non-recessionary 5.55% for high yield. It's hard to believe that as recently as March 23, this speculative-grade bond yield peaked at 11.69%.

Moreover, Moody's Analytics' long-term Baa industrial company bond yield average fell to a 65-year low of 3.41% on Wednesday. The latest long-term Baa industrial yield is less than each of its prior month-long averages going back to February 1955's 3.40%.

Though Wednesday's 212 basis points yield spread over Treasuries for the long-term Baa industrial average was wider than its 190 bp average of the 12 months ended February, what mattered more to the corporate bond market was that Wednesday's Baa yield was well under its 4.33% average of the 12 months ended February. A thinner spread is of little use to a bond holder if it is accompanied by a higher yield. In addition, the prospective cost of debt for a potential corporate borrower is the bond yield and not the bond yield spread.

U.S. Corporates Powered First-Half 2020's Worldwide Issuance of Investment-Grade Bonds

Second-quarter 2020 was home to a 199% year-over-year surge by the issuance of Baa-grade bonds from U.S. corporate borrowers to \$320 billion. By ratings notch, Baa1-grade issuance increased by 102% annually to \$76 billion, Baa2-rated offerings advanced by 163% to \$132 billion, and Baa3-grade supply soared higher by 493% to \$111 billion.

The worldwide issuance of investment-grade corporate bonds grew by 69% annually in 2020's second quarter and by 40% annually in the first half. Second-half 2020's offerings of IG corporate bonds were dominated by an 89% annual surge in the supply of US\$-denominated bonds to \$1.316 trillion. The dollar's share of world IG bond issuance rose from the 51.7% of 2019's first half to the 69.5% of 2020's first half. In turn, first-half 2020's offerings of IG bonds denominated in currencies other than the dollar fell by 11.5% annually.

First-half 2020's issuance of IG bonds from U.S. corporate borrowers skyrocketed by 92.5% annually to \$1.036 trillion. The rest of the world lagged far behind. For example, after the \$528 billion of IG bonds offered by West European companies nearly matched the \$538 billion from their U.S. counterparts during 2019's first half, the \$577 billion of IG bonds issued by Western European companies during 2020's first half was but a fraction of the \$1.036 trillion from U.S. companies. As a result, American companies' share of the worldwide issuance of IG bonds jumped up from the 40% of 2019's first half to the 55% of 2020's first half. Nevertheless, as inferred from June's 45% share, U.S. companies may become less prominent issuers of IG bonds going forward.

Record Quarter for US\$-Denominated Investment-Grade Bond Issuance

The US\$-denominated issuance of IG corporate bonds soared higher in a manner not remotely experienced before. The moving three-month average for US\$-priced IG corporate bonds peaked at May's record-high \$279 billion. Prior to COVID-19, the former zenith was the \$151 billion of the three months ended March 2017. As of June, the moving three-month average eased to still historically elevated \$257 billion, which was a staggering 109% above its lagging 12-month average of \$123 billion.

However, an extraordinarily wide gap between IG bond issuance's moving three- and lagging 12-month averages does not assure a forthcoming drop by such offerings during the ensuing 12-month span. Yes, the US\$-denominated IG corporate bond supply of 2021's second quarter is likely to shrink yearly, but the record falls short of convincingly favoring an outright annual contraction by such bond issuance during the 12 months ended June 2021. In fact, the simple correlation between the percent difference between the IG bond issuance's three- and lagging 12-month averages and the percent change by such issuance during the next 12 months is a statistically meaningless 0.14.

For example, prior to 2020, the largest percent difference between IG bond issuance's moving three-month average and its lagging 12-month average was the 96% of 2001's first quarter. Nevertheless, the US\$-denominated IG corporate bond offerings of the 12 months ended March 2002 grew by an ample 18% year over year.

Credit Markets Review and Outlook

Figure 2: Q2-2020's Average Monthly Issuance of Investment-Grade Bonds Doubled Lagging 12-Month Average

U.S. Companies' Share of World High-Yield Bond Issuance Is Likely to Fade

The U.S. dollar's share of the worldwide issuance of high-yield corporate bonds hardly moved from yearlong 2019's 77% to the 81% of 2020's second half. First-half 2020's 30.0% annual advance by the global issuance of high-yield corporate bonds to \$352 billion included a 24.7% increase by dollar-denominated HY bonds to \$285 billion.

However, U.S. companies' share of the world's HY bond issuance rose from 2019's 45% to the 59% of 2020's first half. First-half 2020's 78.6% annual advance by the supply of new HY bonds from U.S. companies differed radically from the accompanying 2.8% rise by issuance from Western European companies and the 13.6% drop by HY bond offerings from the rest of the world.

| yy % change | 30.0% | 24.7% | | 78.6% | 2.8% | -13.6% | | |

Figure 4 compares the lagging three-month average of US\$-denominated high-yield bond issuance with its average of the contiguous 12 months. The chart shows the \$52 billion average monthly issuance of 2020's second quarter topping the \$38 billion monthly average of the 12 months ended March by 38%. The latter is far from extraordinary. As recently as January, this gap was at 75%. Moreover, for 14 of the moving three-month averages since 1997, the gap was greater than 100%.

Though the negative sign of the correlation between the gap and the annual percent change by HY bond issuance over the next 12 months conformed to expectations, the correlation's -0.22 reading was less than convincing. Indeed, a close inspection of Figure 4 shows many instances where a wide positive gap between the moving three-month average and the lagging 12-month average were followed by an increase for the 12-month average of HY bond issuance. Thus, if COVID-19 risks are resolved by late 2020, high-yield bond offerings might eke out a year-over-year gain for the 12 months ended June 2021.

Outstandings Offer Insight Regarding Future Corporate Borrowings

For U.S. nonfinancial companies, Figure 5 exhibits the tendency of rated corporate borrowing to trend higher with outstanding corporate debt. To a considerable degree, the mere refinancing of outstanding corporate debt fuels gross corporate borrowing. Thus, it is impossible to conceive of a long-lived decline by corporate borrowing if outstanding corporate debt avoids a prolonged contraction.

The moving yearlong sum of rated U.S. corporate borrowing found in Figure 5 includes the rated bonds and loans of U.S. corporations.

Figure 5: Gross Corporate Borrowing Follows the Trend Taken by Corporate Debt Outstanding

Now High Ratio of Corporate Borrowing to Debt Warns of Less Borrowing

The historical record reveals that the annual percent change for corporate borrowing over the next 12 months tends to be livelier the lower is the ratio of gross corporate borrowing to the outstanding

Credit Markets Review and Outlook

corporate debt of a year earlier. When the ratio of the yearlong sum of rated corporate borrowing to outstanding corporate debt is in its top quintile, only 23.1% of the observed quarters showed an annual increase by such corporate borrowing over the next 12 months.

At the other extreme, when the ratio was in its bottom quintile, or when rated corporate borrowing was atypically low vis-a-vis outstanding corporate debt, each of the quarters belonging to the bottom quintile was followed by a year-over-year increase in corporate borrowing during the next 12 months.

For the year ended June, the \$1.836 trillion of rated borrowing by U.S. nonfinancial corporations approximated 18.8% of the \$9.783 trillion of outstanding U.S. nonfinancial-corporate debt as of 2019's second quarter. The 18.8% ratio is well within the ratio's top quintile. In turn, the latest 18.8% ratio suggests that the broadest measure of rated borrowing by U.S. nonfinancial companies will shrink by between 3% and 6% annually during the year ended June 2021.

The Week Ahead – U.S., Europe, Asia-Pacific

THE U.S.

By Sarah Crane of Moody's Analytics

Mask Mandates Are a Safety Net

Several regions of the U.S. appear to be backtracking in terms of COVID-19 containment and labor market performance. After months of steady declines, jobless claims remain stuck at over 2 million filings per week. More states reported increases in initial claims for unemployment insurance in the week ended July 11 compared with the previous week. In fact, two out of three states reported that new filings were no lower than four weeks earlier.

The number of new filings rose in California, where weekly initial claims have trended higher since early May. The Sun Belt looks worse in general, with Florida, Georgia and Nevada claims all heading in the wrong direction. The most recent claims data do not suggest that states gained much of an edge from reopening prematurely. Nor did a cautious approach hold states back. Encouragingly, initial claims dropped to four-month lows last week in Maryland, Massachusetts and North Carolina. All three responded relatively aggressively to the pandemic with lockdowns extending through or beyond mid-May.

The relative public health advantage associated with states that opened cautiously is diminishing. As initial state closures and reopenings get further in the rear-view mirror, it will be important to take other policy developments into consideration when evaluating regional economic performance.

Mask on virus spread and jobless claims

Most areas of the country had reopened by Memorial Day weekend, ushering in the return to restaurants, retail and recreation venues in late May. Two weeks after the holiday, the number of new cases in states that eased restrictions early surpassed that in those with longer lockdown periods. In the weeks since, places that remained closed for longer have experienced increases of their own. It is clear that reopenings lead to disease spread in lenient and deliberate states alike.

However, that trend was far less pronounced in states that had comprehensive mask requirements in place upon reopening. About half of U.S. states were closed in early May, and about half of those states had mandated face coverings in public by Memorial Day. Only one state that reopened early—Maine—enacted a mask mandate by that time. The outcome was that the state mask mandates acted as a safety net for states when they reopened, leading to far milder increases in new COVID-19 cases compared with other states.

Out of the Frying Pan, Into the Fire

New weekly COVID-19 cases per 1,000 residents

Sources: Census Bureau, Johns Hopkins University, Moody's Analytics

Outbreaks that remained relatively contained resulted in more consumer mobility and spending and thus fewer layoffs by businesses. Policy certainty and consistency also support consumer and business confidence and promote longer-term planning.

The Week Ahead

Fewer Claims in Mask-Mandating States

Initial claims for unemployment insurance, % of labor force

Sources: Department of Labor, Moody's Analytics

Still, the worsening pandemic coupled with policy whiplash in many parts of the country jeopardizes the labor market's tenuous progress. A growing number of states are reimposing restrictions as COVID-19 cases spike while others continue to resist measures to restrict the virus' spread. As of July 15, nine states have reversed reopenings and 13 states have paused reopenings, according to The New York Times. Statewide mask mandates have taken effect in nine states since mid-June.

There is a risk that the return to stricter social distancing guidelines could cause unemployment insurance claims to increase as business and consumer confidence erodes, demand declines, and employers are forced to make cuts. Time will tell if the latest state responses can improve the situation in those states or whether they amount to closing the barn door after the horse has bolted.

Next week

The key data next week will be GDP, durable goods orders, initial claims, consumer confidence, personal income/spending, employment cost index, and consumer sentiment.

EUROPE

By Barbara Teixeira Araujo of Moody's Analytics

A Record Plunge Likely for the Euro Zone

Preliminary estimates of second quarter GDP will be in the spotlight in next week's busy European data front. We expect them to be horrid; activity is set to have plunged at its worst pace on record across all euro zone countries and in the currency area itself. But this will come as no surprise, as COVID-19 containment measures put in place by euro zone governments from mid-March led many sectors of the economy to fully shut down. The restrictions' schedule was different across countries, but most European nations remained in full lockdown through the end of April, leading activity in sectors such as nonessential retail, restaurants and cafes, leisure activities, and travel and tourism to have collapsed as people were stuck at home and had to practice social distancing.

While some countries started to reopen their economies from the beginning of May, they did so only gradually. At the same time, other countries kept part of their consumer-faced sectors shut until June or even July. There are two conclusions to take from this: The hit to activity will vary wildly from country to country, depending on how strict the lockdown was and how long it lasted, and the second quarter is expected to have marked the worst of the crisis, with some rebound warranted from July as the economies reopened. Risks remain tilted to the downside. There is the possibility of a second wave of the virus in Europe, which could lead governments to reintroduce countrywide lockdowns. But this is not our base case; even if new cases pick up across the European countries—which we are currently

The Week Ahead

observing—we think that most governments will try to contain the outbreaks through localized shutdowns, which is not as harmful for the national economy as countrywide lockdowns. In any case, we don't expect that the rebound in activity will be sharp enough to bring GDP close to its precrisis levels. We think that it will still take a couple of years before what was lost during the COVID-19 crisis is recouped.

We expect the euro zone's GDP plunged by a record 14.5% q/q in the second quarter, building on a 3.8% decline in the previous stanza. Most of the damage likely was done in Italy, Spain and France, as the lockdowns in those countries were the strictest. Italy and Spain closed all nonessential businesses (not just consumer-faced businesses) during part of April, while several industries and construction sites shut down in France for several weeks. The high-frequency data indicate that those three countries were the ones that suffered the most when the lockdowns were fully in place, with initial estimates suggesting that they lost as much as 30% of their output during that period. We forecast that GDP in Italy fell by 18.2% q/q, while it was down by 17.8% in Spain and by 15.8% in France. The risks surrounding our French forecasts are higher than usual, with several leading indicators suggesting that activity in the country could have plunged at as sharp a rate as in Italy and in Spain. In any case, most of these preliminary GDP results will be based on an unusual share of imputed data. Several sectors were fully or partially closed, which means that data collection was impaired, and this means that they are prone to sharp revisions in the future.

Other countries, such as Germany and the Netherlands, are expected to have suffered much less from the lockdowns. While we do not get the preliminary estimate of German GDP next week, the high-frequency data already suggest that activity in the country was much less disrupted than elsewhere, as the restrictions there were not so strict. Construction activity in the country actually expanded during the lockdown months—this compares with the severe declines in Italy, Spain and France. And that's despite the heightened uncertainty, which is expected to have weighed on investment decisions. Our view is that several building firms took advantage of the lockdown to bring forward major infrastructure or homebuilding projects, though this would nonetheless warrant some revision in the third quarter.

All in, the main story from next week will be that the euro zone entered its worst recession in modern times during the second quarter due to COVID-19. At least the unemployment numbers won't be as bad; we expect them to show that joblessness rose only slightly in the currency area in June, owing to the successful short-term work schemes put in place by the governments to prevent massive layoffs.

ASIA-PACIFIC

By Shahana Mukherjee of Moody's Analytics

Hong Kong's Q2 GDP to Show Severity of COVID-19's Impact

We expect Hong Kong's GDP to have contracted by 11.9% in yearly terms during the June quarter, following an 8.9% decline in the March quarter. Hong Kong's economy was already in a weakened position following the hard-fought U.S.-China trade war and the political unrest through 2019, which caused the economy to slip into recession.

While Hong Kong started 2020 on a weaker note, the COVID-19 outbreak dealt a severe blow to its external position as a result of the large-scale factory closures in China as well as weak internal demand as the economy battled its own localized outbreak. As a result, nearly all components of national income had sharp declines in the range of 9% to 13% in yearly terms over the March quarter. Even though Hong Kong had subsequently contained the localized spread, the sharp decline in overseas demand is expected to weigh unfavourably on the economy's output. Moreover, domestic spending has also struggled to recover, as retail sales stayed 33.9% below levels seen last year. Significant weakness in domestic demand, coupled with the sustained drag from weak overseas demand, is expected to have pushed the economy into a deeper recession over the June quarter.

Japan's unemployment rate is expected to rise to 3.1% in June from 2.9% in May. Labour market conditions in Japan have weakened considerably since the onset of the pandemic. Even though the aggregate increase in unemployment appears lower compared with most other economies, the deterioration was reflected by a 0.6-percentage point decline in the participation rate to 61.8%, and a staggering 20.9% yearly increase in the number of unemployed people in May. Moreover, several workers in Japan are increasingly being furloughed, which masks the extent of real loss in job prospects. With a severely impacted external sector that continues to show strong double-digit declines in exports, and persistent softness in domestic consumer sentiment, employment prospects are fading and the labour market is expected to remain under pressure in the months ahead.

The Long View

July's investment-grade bond issuance will be well under its year-earlier pace.

By John Lonski, Chief Economist, Moody's Capital Markets Research Group
July 23, 2020

CREDIT SPREADS

As measured by Moody's long-term average corporate bond yield, the recent investment grade corporate bond yield spread of 131 basis points far exceeded its 122-point mean of the two previous economic recoveries. This spread may be no wider than 135 bp by year-end 2020.

The recent high-yield bond spread of 582 bp is thinner than what is suggested by the accompanying long-term Baa industrial company bond yield spread of 212 bp and the recent VIX of 26.3 points. The latter has been statistically associated with a 715-bp midpoint for the high-yield bond spread.

DEFAULTS

June 2020's U.S. high-yield default rate of 7.3% was up from June 2019's 3.3% and may approximate 12.3%, on average, by 2021's first quarter.

US CORPORATE BOND ISSUANCE

First-quarter 2019's worldwide offerings of corporate bonds revealed annual setbacks of 0.5% for IG and 3.6% for high-yield, wherein US\$-denominated offerings fell by 3.0% for IG and grew by 7.1% for high yield.

Second-quarter 2019's worldwide offerings of corporate bonds revealed an annual setback of 2.5% for IG and an annual advance of 17.6% for high-yield, wherein US\$-denominated offerings sank by 12.4% for IG and surged by 30.3% for high yield.

Third-quarter 2019's worldwide offerings of corporate bonds revealed annual advances of 15.2% for IG and 56.8% for high-yield, wherein US\$-denominated offerings soared higher by 36.8% for IG and 81.3% for high yield.

Fourth-quarter 2019's worldwide offerings of corporate bonds revealed annual advances of 15.3% for IG and 329% for high-yield, wherein US\$-denominated offerings dipped by 0.8% for IG and surged higher by 330% for high yield.

First-quarter 2020's worldwide offerings of corporate bonds revealed annual advances of 17.7% for IG and 26.5% for high-yield, wherein US\$-denominated offerings increased by 43.7% for IG and grew by 21.4% for high yield.

For 2019, worldwide corporate bond offerings grew by 5.4% annually (to \$2.447 trillion) for IG and advanced by 49.2% for high yield (to \$561 billion). The projected annual percent changes for 2020's worldwide corporate bond offerings are a 6.4% rise for IG and a 0.5% dip for high yield.

US ECONOMIC OUTLOOK

An unfolding global recession will rein in Treasury bond yields. As long as the global economy operates below trend, 1.25% will serve as the upper bound for the 10-year Treasury yield. Until COVID-19 risks fade, substantially wider credit spreads are possible.

The Long View

EUROPE

By Ross Cioffi of Moody's Analytics

July 23, 2020

EU

The EU agreed this week on the new Multi-Annual Financial Framework for 2021-2027. The framework is the budget through which the EU will channel its joint 'Next Generation EU' stimulus effort. The agreement required some hard compromise. Although concessions limited the scope of the original proposal, the member states were able to agree on the most contentious point, namely that the European Commission will borrow money in the markets to finance transfers to member states.

The total size of the Next Generation EU plan remained at €750 billion. The keystone instrument, the Recovery and Resilience Fund, has been expanded from the original proposal, while the share of loans to grants has been increased. The Recovery and Resilience Fund will total €672.5 billion, up from €560 billion; there will be €312.5 billion in grants, up from €310 billion; and €360 billion in loans, up from €250 billion.

We aren't too worried about the EU's ability to pay back the debts incurred. However, the question of what new revenue streams would be created was left for another time. For now, members have agreed only on a new levy on plastic waste. The most likely scenario is that members will drag their feet on creating new revenue streams for the EU. The result will be that the cost gets amortized by decreasing the size of future financial frameworks.

The EU members compromised by cutting other spending programs, which lowered the total share of grants to €390 billion from €500 billion. The total amount of grants was reduced by trimming allocations to long-term investment in greening and digitizing, research and development, and health. This was the price to pay for a speedier agreement. Given the importance of a timely agreement for maintaining financial stability this winter, when national loan guarantees and wage-subsidy programs start winding down, the trade-off isn't in vain. The European Central Bank's July Bank Lending Survey reported that banks are expecting credit standards to tighten this fall, when loan guarantee programs approach their upper limits.

Funds from the Recovery and Resilience Fund won't be disbursed until the start of 2021, but together with the EU policies already in place, member states have the backing to taper off stimulus more slowly. This should mitigate the tightening of credit standards or other hits to liquidity. Although the final deal was pared back, it is still a historic event and markets were right to rejoice. European shares jumped immediately after the news.

There is still some downside risk that the plan gets sent back to the drawing board. The European Parliament will now vote on the program, and it may want stronger conditionality on the respect of rule of law in recipient countries. The Multi-Annual Financial Framework will also have to be ratified by national legislatures. The likelihood the plan is rejected is minimal, but grandstanding by politicians may unsettle nerves now and again in the coming months.

EURO ZONE

European countries have spent big to counteract the economic hit from the pandemic. The mix of short-term work schemes, loan guarantees, and transfers—on top of pre-existing automatic stabilizers—has prevented Europe from getting trapped in a spiral of bankruptcies and unemployment. But fiscal space, or the amount states can increase spending before impairing debt sustainability, differs widely across Europe. Some member states could therefore act faster or spend more. Now the important question is whether those that need to top off spending will have the ability to do so.

Of the four major euro zone economies, Italy has put up the most money for stimulus. We estimate that nearly 49.4% of Italian GDP has been allocated to stimulus measures, though only about 4.5% of GDP is in direct spending; the rest is in liquidity measures and loan guarantee programs. Thanks to the agreement Tuesday on the new Multi-Annual Financial Framework, the EU's new stimulus instrument, the Recovery and Resilience Facility could transfer up to an extra 3.5% of GDP to the country over the next three years. Germany has put up 40.6% of GDP in stimulus—given its fiscal space, it was able to dedicate 9% to direct measures—and can receive up to 0.7% of its GDP in grants. France has so far promised 18.1% of GDP and could receive transfers equivalent to 1.3% of its GDP through the Recovery and Resilience Facility, while Spain put up 12.9% and could get up to 4.9% of its GDP in grants.

The Long View

Member states' stimulus plans have supported the early signs of recovery, such as rebounding retail sales and slowing unemployment growth. But if the recovery stalls or if there is a major second wave of COVID-19 infections, more will be needed. Italy would be slammed in such a situation, as it has minimal space to increase spending; already, it depends on the European Central Bank's Pandemic Emergency Purchase Program to keep borrowing costs from soaring. France and Spain also have limited space to act; only Germany could marshal another substantial stimulus. This is why it was so important for the EU to agree on a joint recovery fund. If Italy could promise an additional 3.5% of GDP in spending, it would not only continue important countercyclical policies but would also pacify markets. In a second-wave scenario, however, Europe would be able to muster much less firepower, leaving it in a more precarious situation.

SENTIMENT

Business and consumer sentiment has been improving in France and Germany since lockdowns were lifted. In Germany, the GfK index of consumer sentiment jumped to -0.3 for August from -9.4 for July. Significant improvements in income expectations and propensity to buy drove the increase in the composite index, while the government's massive stimulus policies boosted morale. The temporary cut in the value-added tax, in particular, supported propensity to buy. The VAT cut will prompt unplanned spending, but it will also shift future spending into the present, so we expect propensity to buy to deflate once the cut expires in January.

In France, the INSEE registered a 7-point increase in the business climate index, to 85 in July. Although the reading remains below the long-term average (100), it has steadily rebounded from its low in April. In the manufacturing sector, the index rose 4 points to 82, driven mostly by a better view of past activity. One reason for the current optimism is the continued increase in capacity utilization across all industrial subsectors. The quarterly business survey estimates that by July, capacity utilization had risen to 74% from an unprecedented trough of 61% in April. Most concerns over supply have eased now that lockdowns are over, but worries about demand have only intensified since April. The climate in the services sector improved more than in manufacturing, up by 11 points to 89 in July. The balance of opinion on expected activity reached just above the long-term average, but the balance on expected demand remained just below it.

Across the Channel, the U.K. the CBI quarterly business optimism index surged to -1 from its all-time low of -87 in April. Manufacturers were considerably more optimistic about the third quarter thanks to the end of the national lockdown. After a disastrous second quarter, firms expect domestic demand to rebound but expect export orders to stay weak. Likewise, firms still expect employment and gross fixed capital formation to decline over the year, but each will occur at a much softer pace than before.

ASIA PACIFIC

By Shahana Mukherjee of Moody's Analytics
July 23, 2020

JAPAN

The economic costs of the COVID-19 pandemic will be deep and protracted for Japan. Japan's external position weakened further in June, as exports declined for the fourth consecutive month, falling by 26.2% in yearly terms after a deeper 28.3% decline in May. Shipments were weighed down by a persistent shortfall in overseas demand for transport equipment, and general purpose and electrical machinery.

Following the trend in recent months, the underlying drivers of weakness remained relatively unchanged. The slowdown in June's exports is similar in magnitude to what was seen in May, which is surprising, considering that May's performance reflected the effects of simultaneous lockdowns imposed or extended in the U.S., Europe, and parts of Asia, in addition to the internal supply-side effects from the local nationwide shutdown.

But an important factor that was prevalent even in June was the steady weakness in U.S.-bound shipments, which nearly halved in June, falling by 46.6%, compared with levels a year ago. This is significant for Japan, considering that the U.S. is one its main export destinations. The steady rise in U.S. COVID-19 cases in recent weeks is thus a severe risk that is likely to drive the decline in Japan's exports, which now appears likely to extend beyond June. That said, Japan's China-bound shipments continue to improve and partially neutralize the sharp contraction.

Little cushion

Another important factor that weighs unfavourably for Japan is its strong dependence on durables and investor goods in its export basket, which provides little cushion to counter the cyclical downside forces. Demand for durable goods such as cars and other vehicles continues to weaken, affecting demand for Japan's transport

The Long View

equipment exports, which make up 17% of its total merchandise exports. Meanwhile a bleak business outlook has dented demand for production goods, affecting demand for general purpose and electrical machinery, which cumulatively makes up nearly 41% of Japan's total exports. As a result, the three commodity groups continue to contribute the most to the net decline, accounting for 9.5, 5 and 3.1 percentage points, respectively, of the 26.2% decline in June.

The downside risks facing Japan's exporters largely remain in place. While a recovering China bodes well, conditions elsewhere appear to be weakening further. Coronavirus cases in the U.S., India, and parts of Latin America and Africa are on the rise, and the emergence of a second wave in Hong Kong and Australia poses new risks from another setback.

Adding to Japan's worries is a sharp increase in domestic COVID-19 cases in recent days; Japan reported 795 new cases on Tuesday, the highest daily increase since April, as the local spread widens across prefectures. This raises the possibility of additional restrictions to bring the localised spread under control. Moreover, rising geopolitical tensions between the U.S. and China, and China and the U.K., are likely to stoke uncertainty and weigh on already weakened investor sentiment and global trade volumes in the near term. Japan is already in recession, but with the downside risks dominating the current economic setting, the road to recovery in the post-COVID environment is likely be a protracted one.

Ratings Round-Up

Ratings Round-Up

U.S. Downgrades Increase But Affect Small Percentage of Debt

By Michael Ferlez

U.S. rating change activity worsened last week, with downgrades outnumbering upgrades nine to four. However, despite being outnumbered, upgrades accounted for 90% of affected debt. Downgrades were spread across several industries, though changes were largely limited to small, speculative-grade companies. Business services and exploration production firms continue to be the most negatively impacted by the recession, with each industry suffering two additional downgrades last week. On the upgrade side, the most notable change was made to The Dun & Bradstreet Corporation. Moody's Investors Service upgraded the IT firm's corporate family rating and senior secured credit rating to B2 and B1, respectively. A key factor behind the upgrade was the reduction in Dun & Bradstreet Corporation's trailing debt/EBIDTA ratio following the repayment of its outstanding preferred stock and part of its unsecured notes. The upgrade affected \$1.5 billion in debt.

European rating volume increased in the past week, though corporate credit quality remained weak. For the week ended July 21, downgrades accounted for two-thirds of European rating change activity. The United Kingdom lead the way with four rating changes (three downgrades), followed by Spain and the Netherlands with one rating action each. The week's most notable change was to Hammerson PLC. The U.K.-based REIT saw its issuer rating and senior unsecured credit rating downgraded to Baa3 from Baa2. The downgrade was in response to market weakness caused by the global pandemic as well as Moody's Investors Service's expectation of a prolonged weakness in rents and values.

© 2020 Moody's Corporation, Moody's Investors Service, Inc., Moody's Analytics, Inc. and/or their licensors and affiliates (collectively, "MOODY'S"). All rights reserved.

CREDIT RATINGS ISSUED BY MOODY'S INVESTORS SERVICE, INC. AND ITS RATINGS AFFILIATES ("MIS") ARE MOODY'S CURRENT OPINIONS OF THE RELATIVE FUTURE CREDIT RISK OF ENTITIES, CREDIT COMMITMENTS, OR DEBT OR DEBT-LIKE SECURITIES, AND MOODY'S PUBLICATIONS MAY INCLUDE MOODY'S CURRENT OPINIONS OF THE RELATIVE FUTURE CREDIT RISK OF ENTITIES, CREDIT COMMITMENTS, OR DEBT OR DEBT-LIKE SECURITIES. MOODY'S DEFINES CREDIT RISK AS THE RISK THAT AN ENTITY MAY NOT MEET ITS CONTRACTUAL FINANCIAL OBLIGATIONS AS THEY COME DUE AND ANY ESTIMATED FINANCIAL LOSS IN THE EVENT OF DEFAULT OR IMPAIRMENT. SEE MOODY'S RATING SYMBOLS AND DEFINITIONS PUBLICATION FOR INFORMATION ON THE TYPES OF CONTRACTUAL FINANCIAL OBLIGATIONS ADDRESSED BY MOODY'S RATINGS. CREDIT RATINGS DO NOT ADDRESS ANY OTHER RISK, INCLUDING BUT NOT LIMITED TO: LIQUIDITY RISK, MARKET VALUE RISK, OR PRICE VOLATILITY. CREDIT RATINGS AND MOODY'S OPINIONS INCLUDED IN MOODY'S PUBLICATIONS ARE NOT STATEMENTS OF CURRENT OR HISTORICAL FACT. MOODY'S PUBLICATIONS MAY ALSO INCLUDE QUANTITATIVE MODEL-BASED ESTIMATES OF CREDIT RISK AND RELATED OPINIONS OR COMMENTARY PUBLISHED BY MOODY'S ANALYTICS, INC. CREDIT RATINGS AND MOODY'S PUBLICATIONS DO NOT CONSTITUTE OR PROVIDE INVESTMENT OR FINANCIAL ADVICE, AND CREDIT RATINGS AND MOODY'S PUBLICATIONS ARE NOT AND DO NOT PROVIDE RECOMMENDATIONS TO PURCHASE, SELL, OR HOLD PARTICULAR SECURITIES. NEITHER CREDIT RATINGS NOR MOODY'S PUBLICATIONS COMMENT ON THE SUITABILITY OF AN INVESTMENT FOR ANY PARTICULAR INVESTOR. MOODY'S ISSUES ITS CREDIT RATINGS AND PUBLISHES MOODY'S PUBLICATIONS WITH THE EXPECTATION AND UNDERSTANDING THAT EACH INVESTOR WILL, WITH DUE CARE, MAKE ITS OWN STUDY AND EVALUATION OF EACH SECURITY THAT IS UNDER CONSIDERATION FOR PURCHASE, HOLDING, OR SALE.

MOODY'S CREDIT RATINGS AND MOODY'S PUBLICATIONS ARE NOT INTENDED FOR USE BY RETAIL INVESTORS AND IT WOULD BE RECKLESS AND INAPPROPRIATE FOR RETAIL INVESTORS TO USE MOODY'S CREDIT RATINGS OR MOODY'S PUBLICATIONS WHEN MAKING AN INVESTMENT DECISION. IF IN DOUBT YOU SHOULD CONTACT YOUR FINANCIAL OR OTHER PROFESSIONAL ADVISER.

ALL INFORMATION CONTAINED HEREIN IS PROTECTED BY LAW, INCLUDING BUT NOT LIMITED TO, COPYRIGHT LAW, AND NONE OF SUCH INFORMATION MAY BE COPIED OR OTHERWISE REPRODUCED, REPACKAGED, FURTHER TRANSMITTED, TRANSFERRED, DISSEMINATED, REDISTRIBUTED OR RESOLD, OR STORED FOR SUBSEQUENT USE FOR ANY SUCH PURPOSE, IN WHOLE OR IN PART, IN ANY FORM OR MANNER OR BY ANY MEANS WHATSOEVER, BY ANY PERSON WITHOUT MOODY'S PRIOR WRITTEN CONSENT.

CREDIT RATINGS AND MOODY'S PUBLICATIONS ARE NOT INTENDED FOR USE BY ANY PERSON AS A BENCHMARK AS THAT TERM IS DEFINED FOR REGULATORY PURPOSES AND MUST NOT BE USED IN ANY WAY THAT COULD RESULT IN THEM BEING CONSIDERED A BENCHMARK.

All information contained herein is obtained by MOODY'S from sources believed by it to be accurate and reliable. Because of the possibility of human or mechanical error as well as other factors, however, all information contained herein is provided "AS IS" without warranty of any kind. MOODY'S adopts all necessary measures so that the information it uses in assigning a credit rating is of sufficient quality and from sources MOODY'S considers to be reliable including, when appropriate, independent third-party sources. However, MOODY'S is not an auditor and cannot in every instance independently verify or validate information received in the rating process or in preparing the Moody's publications.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability to any person or entity for any indirect, special, consequential, or incidental losses or damages whatsoever arising from or in connection with the information contained herein or the use of or inability to use any such information, even if MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers is advised in advance of the possibility of such losses or damages, including but not limited to: (a) any loss of present or prospective profits or (b) any loss or damage arising where the relevant financial instrument is not the subject of a particular credit rating assigned by MOODY'S.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability for any direct or compensatory losses or damages caused to any person or entity, including but not limited to by any negligence (but excluding fraud, willful misconduct or any other type of liability that, for the avoidance of doubt, by law cannot be excluded) on the part of, or any contingency within or beyond the control of, MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers, arising from or in connection with the information contained herein or the use of or inability to use any such information.

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY CREDIT RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any rating, agreed to pay to Moody's Investors Service, Inc. for ratings opinions and services rendered by it fees ranging from \$1,000 to approximately \$2,700,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moody.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657 AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors.

Additional terms for Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any rating, agreed to pay to MJKK or MSFJ (as applicable) for ratings opinions and services rendered by its fees ranging from JPY125,000 to approximately JPY250,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

For Publications Issued by Moody's Capital Markets Research, Inc. only:

The statements contained in this research report are based solely upon the opinions of Moody's Capital Markets Research, Inc. and the data and information available to the authors at the time of publication of this report. There is no assurance that any predicted results will actually occur. Past performance is no guarantee of future results.

The analysis in this report has not been made available to any issuer prior to publication.

When making an investment decision, investors should use additional sources of information and consult with their investment advisor. Investing in securities involves certain risks including possible fluctuations in investment return and loss of principal. Investing in bonds presents additional risks, including changes in interest rates and credit risk.

Moody's Capital Markets Research, Inc., is a subsidiary of MCO. Please note that Moody's Analytics, Inc., an affiliate of Moody's Capital Markets Research, Inc. and a subsidiary of MCO, provides a wide range of research and analytical products and services to corporations and participants in the financial markets. Customers of Moody's Analytics, Inc. may include companies mentioned in this report. Please be advised that a conflict may exist and that any investment decisions you make are your own responsibility. The Moody's Analytics logo is used on certain Moody's Capital Markets Research, Inc. products for marketing purposes only. Moody's Analytics, Inc. is a separate company from Moody's Capital Markets Research, Inc.
