### MOODY'S ANALYTICS ADDS SECURITIZATION PERFORMANCE DATA TO MOODY'S CREDITVIEW

LAS VEGAS, February 29, 2016 - Moody's Analytics announced today that it has added transaction-specific performance data to Moody's CreditView, allowing customers to compare performance of securitizations globally across a variety of metrics.

Moody's customers can customize the data using interactive tools to assess the credit performance of a single deal; screen for peer transactions; assess trends with interactive charting; and forecast the performance of newly issued transactions by evaluating seasoned deals.

"The structured finance performance data on Moody's CreditView gives insight into the research and ratings provided by Moody's Investors Service," said Andrea Blackman, Managing Director, Moody's Analytics. "This marks the further evolution of the product as a comprehensive and streamlined source of credit information following our inclusion of data covering the corporate, bank, and municipal sectors."

Moody's CreditView is a market-leading tool for analyzing, comparing and monitoring credit metrics and performance. It offers access to ratings, research, data and analysis from Moody's Investors Service, integrated with complementary data and analysis produced by Moody's Analytics. The product is part of Moody's Analytics' full product suite for the structured finance market.

The suite also includes the Structured Finance Portal, which offers advanced cash flow analytics, benchmarking, credit modeling, and an extensive loan-level database. Completing the suite, ABS System, the leading platform used by issuers to model their securitizations, offers pool selection as well as investor and regulatory reporting.

Moody's Analytics will be conducting demonstrations of its structured finance product suite at the ABS Vegas 2016 conference, hosted by SFIG and IMN.
