## Moody's Analytics launches the CreditLens™ platform

New York, October 23, 2017 – Moody's Analytics has launched the CreditLens platform, our next-generation credit origination and risk monitoring solution. This new platform offers flexibility, configurability and efficiency to lending institutions striving to establish smarter and leaner loan origination practices.

The CreditLens platform reduces time-to-decision while tapping into powerful models and insightful analytics that help lenders manage risk and drive productivity. Lenders gain efficiency from the solution's automated spreading capability and a flexible model authoring module. They also gain deep insights from built-in Moody's Analytics Risk Grading features and Business Insights dashboards, which provide a complete view of the lender's credit relationships. Automation in the platform also reduces errors and preserves data lineage throughout the credit assessment and origination process.

The platform has been designed for configurability to align with each lender's unique business strategies. Clients can choose from several implementation options for the CreditLens solution: software-as-a-service, private or public cloud, or on-premise installation.

"Now more than ever, financial institutions must innovate to keep pace with their customers' evolving needs," said Elaine Wong, Managing Director at Moody's Analytics. "The CreditLens platform gives lenders more control and helps them make higher quality loans, faster."
