## Moody's Analytics takes top position in Chartis credit risk report

NEW YORK, July 10, 2018 – Moody's Analytics, a leading provider of financial intelligence, has taken the top position among category leaders in a new Chartis Research report, [Technology Solutions for Credit Risk 2.0 2018](#), that compares 19 vendors of credit risk (banking book) solutions. We earned this recognition on the combined strength of our wholesale and consumer credit assessment and origination offerings.

"We're honored to be recognized by Chartis for our industry-leading credit risk capabilities," said Jacob Grotta, Managing Director-Head of Risk Measurement at Moody's Analytics. "Our solutions enable firms to assess and manage credit risk exposures throughout the credit lifecycle, creating insights that help them to make smarter and faster business decisions."

Moody's Analytics wholesale credit offerings, including the [RiskCalc™](#) and [CMM™](#) credit scoring solutions, allow clients to analyze the credit risk of companies and commercial real estate properties. Clients use these solutions to access a broad range of credit risk analytics, industry benchmarks, and peer insights for lending, monitoring, allowance, and portfolio management. Powered by our proprietary data

and modeling framework, our solutions enable organizations to tailor Moody's Analytics models to their unique needs.

Moody's Analytics consumer credit solutions help firms anticipate risks and opportunities by directly correlating lending behavior with current and future economic conditions. Our consumer credit solutions, including loss forecasting tools such as [CECL Solver for Moody's CreditCycle™](#) and our [Expected Consumer Credit Losses \(ECCL\) Service](#), cover the spectrum of consumer credit risk.

Moody's Analytics credit assessment and origination solutions, including the [CreditLens™](#) platform, help financial institutions make better commercial credit decisions faster and more efficiently. We recently [enhanced](#) the CreditLens solution with new capabilities to help our clients improve their lending decisions through automation and digitization.

[Technology Solutions for Credit Risk 2.0 2018](#) uses Chartis' FinTech Quadrant® methodology. This methodology considers vendors' technology, product, and organizational capabilities while emphasizing the completeness of their offerings and their market potential.

This is the latest in a series of accolades for Moody's Analytics. Last month we earned the [top position](#) in Chartis' *CECL Technology Solutions 2018*, which evaluated 17 vendors offering Current Expected Credit Loss (CECL) solutions. In May, we took the [top spot](#) in Chartis' *Balance Sheet Management Technology 2018*, which compared 12 balance sheet management vendors. Our CECL and balance sheet solutions integrate with outputs of our credit risk solutions. These results follow Moody's Analytics being named [Technology Vendor of the Year](#) in the 2018 Risk Awards and, most recently, winning [three](#) 2018 Risk Technology Awards.
