Moody's Analytics Wins Two Categories at Data Management Awards 2018

NEW YORK, December 11, 2018 – Moody's Analytics, a global provider of financial intelligence, has won Best Risk Data Aggregation Platform at the Data Management Awards 2018. Bureau van Dijk, a Moody's Analytics company, won the award for Best Entity Data Solution.

We earned the prize for Best Risk Data Aggregation Platform for the breadth and strength of Moody's Analytics risk data aggregation capabilities. Our [CreditEdge™](#) platform provides early warning of credit deterioration of public entities and sovereigns globally, while members of the Moody's Analytics [Data Alliance](#) can access one of the world's largest collections of private credit risk data. Our [RiskFoundation™](#) platform consolidates data from these and other sources to create a financial and risk datamart from which to view and measure enterprise risk across your portfolio.

"We're honored to be recognized in the Data Management Awards," said Dan Russell, Executive Director. "Our customers' portfolios are increasingly diverse. They need to manage their risk more efficiently, on more entities, across more asset classes. Our award-winning risk data aggregation tools allow them to do that."

The CreditEdge platform combines the industry-leading Moody's Analytics EDF™ (Expected Default Frequency) model, a forward-looking probability of default measure, with cutting-edge analytics and more than 250 entity and industry data points. Customers can use the CreditEdge tool to measure the credit risk of public firms and sovereigns with advance early warning. More than 300 institutions (financial firms, asset managers, and regulatory and governmental agencies) across the globe use metrics from the CreditEdge platform.

The Moody's Analytics Data Alliance is one of the world's largest and most comprehensive data consortia. Member firms contribute and aggregate their data and collect credit risk benchmarking insight in return, drawn from a global database that includes more than 100 million financial statements representing more than 20 million private firms. The [award-winning](#) Data Alliance Portal allows member firms to securely upload data for all its asset

classes, including Commercial & Industrial, Project Finance, Asset Finance, and Commercial Real Estate.

The Moody's Analytics RiskFoundation data platform supplies the infrastructure for an exceptional risk management system. It brings together risk and finance data from different source systems into one common system of record – a “single source of truth” that lets customers examine their enterprise risk holistically. The RiskFoundation platform is a key component of numerous Moody's Analytics solutions that support compliance with regulatory guidelines.

Bureau van Dijk took the prize for Best Entity Data Solution for the [Orbis](#) database. Orbis currently has information on 300 million entities in all countries, with an emphasis on private company information. Customers across the globe use Orbis to manage risk, achieve business growth, and improve efficiency, particularly around client and third-party onboarding and due diligence. As well as financial data, Orbis includes a vast range of complementary data which includes extensive corporate structures and ownership information.

The Data Management Awards, now in their sixth year, are presented by A-Team Group. They recognize firms that provide industry-leading data management solutions and services to capital markets participants. This win adds to the [growing list](#) of awards for Moody's Analytics, including a [top-five ranking](#) and [five solution category wins](#) in the 2019 Chartis RiskTech100®.
