## Moody's Analytics Rolls Out Major New Automation Functionality to CreditLens™ Solution

**NEW YORK, February 14, 2019** – Moody's Analytics, a leading provider of financial intelligence, has added significant new automation functionality to the [CreditLens](#) credit-lifecycle-management solution, including automated spreading of financial statements and covenant tracking. Built on the latest cloud-based technology, the CreditLens platform helps financial institutions digitally transform their commercial credit processes to make faster and better-informed credit decisions.

Through integration with the new Moody's Analytics [QUIQspread](#) tool, the CreditLens solution leverages machine-learning technology to extract financial statement data from word processing documents, PDFs, spreadsheets, images, and more. This integration automates one of the most laborious aspects of credit decisioning – the manual collation, extraction, and input of financial data.

The CreditLens platform now also automates covenant tracking. Clients simply specify a testing schedule, and the system will automatically warn of missing information or any breaches of financial covenants.

These automation features complement the solution's strong configurability to make it easier for clients to quickly align to dynamic business requirements, whether those are new internal policies, changing priorities, or regulatory mandates.

"Many bankers haven't yet digitally transformed their business, so their days are filled with tedious tasks associated with manual spreading and covenant tracking," said Annie Choi, Senior Director of Product Management at Moody's Analytics. "These enhancements to the CreditLens solution enable bankers to quickly realize the potential of a digital transformation, freeing up their time to spend on strategic matters, like providing more effective customer service or expanding portfolios."
