Moody's Analytics Wins Wholesale Credit Modelling Software of the Year at Risk Technology Awards

NEW YORK, July 11, 2019 – Moody's Analytics, a global provider of financial intelligence, has won Wholesale Credit Modelling Software of the Year in the 2019 Risk Technology Awards. It's one of six categories won, spanning finance, accounting, regulatory, and credit functions.

A suite of integrated Moody's Analytics offerings contributed to this win, including the CreditEdge™ solution, which delivers a leading probability of default model and advanced analytics for managing the daily credit risk of more than 60,000 public firms and sovereigns.

Our RiskCalc™ credit scoring platform helps clients assess the credit risk of private firms, commercial banks, project finance projects, and insurance companies. The CMM™ solution combines property performance forecasts with commercial mortgage fundamentals to assess default and recovery risk for commercial real estate properties.

The new CAP™ platform expands the breadth of our credit risk solutions and strengthens the model lifecycle by enabling clients to leverage award-winning Moody's Analytics credit data, modeling, validation, and monitoring frameworks in creating models which fit their own experiences. The Moody's Analytics suite also offers models and scorecards for commercial real estate, municipal finance, financial institutions, and other asset classes to cover the entire wholesale portfolio.

"We're highly gratified by this recognition from *Risk*," said Jacob Grotta, Managing Director-Head of Risk & Finance Analytics. "Our wholesale credit modeling solutions help clients undertake rigorous and transparent credit risk practices and achieve their business goals."

"Moody's Analytics is a 900-pound gorilla – hard to beat for credit tools and demonstrating year-on-year responsiveness to industry demands," said one of this year's award judges.

This win adds to our growing list of awards and industry accolades.
