CreditLens™ Solution Receives SOC 2 Attestation Report

NEW YORK, December 13, 2019 – Moody's Analytics announced today that the CreditLens software-as-a-service (SaaS) solution has received an attestation report from the American Institute of Certified Public Accountants (AICPA) System and Organization Controls (SOC 2). The SOC 2 report details the security and availability of customer data in the CreditLens SaaS solution, and denotes its adherence to the AICPA's security and availability controls standards.

Built on the latest cloud-based technology, the CreditLens platform helps businesses digitally transform their commercial credit processes to make faster and better-informed decisions. It facilitates process automation and helps clients improve their efficiency, reduce errors, and streamline workflows.

A SOC 2 report ensures that a company's information security measures are in line with the unique parameters of today's cloud requirements. The report addresses a service organization's controls that relate to operations and compliance, as outlined by the AICPA's Trust Services criteria.

An independent third-party audit firm issues the SOC 2 report, which includes examination procedures to confirm that a service provider is securely managing data to protect the interests and the privacy of its clients' data. It also ensures companies have established and are following strict information security policies and procedures encompassing the security, availability, processing, integrity, and confidentiality of customer data.

"We are committed to providing our SaaS clients with data security and operational effectiveness that fits in the context of their evolving regulatory and operational environments," said Elaine Wong, Managing Director at Moody's Analytics. "This SOC 2 attestation demonstrates that our CreditLens solution has met these objectives."
