Moody's Analytics Wins an Artificial Intelligence Award

NEW YORK, January 16, 2020 – Moody's Analytics, a global provider of financial intelligence, has won the Best Financial Services AI Solution category at the [2019 Artificial Intelligence Awards](#). We won the award for our [QUIQspread™](#) tool, which helps institutions automate the spreading of financial statements.

Our extensive financial spreading expertise and data resources are at the heart of the QUIQspread tool, which uses machine learning to understand your institution's financial data spreading policies. Increased accuracy, shorter processing times, and lower costs are achieved as the tool gets smarter with every spread.

The QUIQspread tool was developed by the [Moody's Analytics Accelerator](#), which uses emerging technologies to build next-generation Moody's Analytics risk management solutions.

It also integrates seamlessly with the [CreditLens™](#) platform, our credit lifecycle management solution, which helps businesses digitally transform their commercial credit processes. Firms using the CreditLens solution can run financial statements through the QUIQspread tool without leaving the platform. Like the QUIQspread tool, the CreditLens solution boasts artificial intelligence and machine learning capabilities that help it learn as you use it.

"We're honored to be recognized in the Artificial Intelligence Awards," said Ashit Talukder, Head of Machine Learning at Moody's Analytics. "Firms are seeking to spend less time and less resources on the spreading process—while preserving the quality of data. With our QUIQspread tool, we are helping make that possible."

[Join our webinar](#) on February 6 to learn more about how the QUIQspread and CreditLens solutions can help your institution make better, faster decisions.
