

The Market-Consistent Economic Scenario Generator is a suite of stochastic asset modeling tools in a flexible framework that allows insurers to produce risk-neutral scenarios to value optionality in insurance liabilities, as required by regulatory and accounting regimes. Risk-neutral modeling is also used for hedging and risk management activities.

Generate market-consistent scenarios

- » Leverage risk-neutral scenarios for liability valuation. Models are calibrated to market data where appropriate, resulting in market-consistent liability values.
- » Gain a robust and easy-to-use automation framework to support the production of many stress and sensitivity calibrations.

- » Benefit from comprehensive calibration services covering a wide range of economies and asset classes, produced to exacting standards of governance and quality assurance.
- » Receive comprehensive documentation of all models and calibrations, including calibration reports, model methods, calibration methods, assumption updates, and policy and compliance documents.
- » Implement a suite of financial models covering many asset classes and sophistication levels.

Create stress scenarios in the automation module

Get up and running quickly with modeling options to meet your requirements

- » Combine easy-to-use software, calibration services, comprehensive documentation, and expert advisory services to get up and running quickly.
- » Choose modeling options for the major risks and asset types, and also for your own requirements, considering the nature of your liabilities and level of sophistication.
- » Model a wide range of assets in a flexible framework, including equities, nominal and real interest rates, corporate bonds, real estate, currencies, and hedge funds.
- » Minimize run times using advanced software with a range of automation and performance scaling capabilities, including grid and cloud computing.
- » Benefit from an ongoing and extensive R&D program which continually reviews and updates our models and methods as new techniques become available.
