

## Build Resiliency Into Your Business Model With Data-driven Supplier Risk Management

Supplier risk management is becoming more complex, and the last few years have shown the importance of creating resiliency in the face of growing risks. Whether you're building models and contingency plans for unexpected events, or shoring up your processes for onboarding new suppliers and monitoring your supplier portfolio, enhancing your internal data with quality third-party data will help you gain a more holistic view of your supplier portfolio.

### Supplier Risk Management Is Critical To The Health Of Your Business

Supply chain risk goes beyond the ability of your suppliers to meet their basic obligations. It extends to the impact a supplier can have on the integrity and resilience of your supply chain, on your brand and reputation, and on your overall profitability. A trusted, global third-party data and analytics provider can help you manage and mitigate these supplier risks by providing specialty data, risk metrics and scores, and analytical tools and models to help you gain insight into operational, financial, and reputational risk and ESG practices. This will allow you to streamline your supplier onboarding process, monitor risks in your existing supplier portfolio, and manage ongoing exposures in your supply chain.

#### Benefits of our supplier risk management solutions:

Help you build a 360° view of your suppliers

Deliver sophisticated workflows to help you assess risk exposures across your supplier portfolio

Provide insight into supplier credit worthiness, ESG practices and compliance risks

## Third-Party Data Providers Can Enhance Your Supplier Risk Management

You will need a trusted third-party data provider to realize these benefits. The key elements you will need that firm to deliver are:

- » A database of actual and potential suppliers, in the locations in which you operate
- » Detailed corporate structures and sophisticated ownership analytics
- » Ratings and financial data for peer comparison analysis
- » Near-real time supplier news, sentiment, and alerts

## We Want to Be Your Trusted Third-Party Supplier Risk Data Provider

We can help you expand and improve the quality of your supplier data by providing access to:

- » Data on over 425 million global entities across more than 200 countries
- » Over 270 million entities with ESG scores
- » Over 135 million quantitative ratings and scores
- » Over 1.5 billion ownership links, including over 199 million active ownership links

You can access these resources directly through our web-based platforms or connect to them from your existing platforms via our proprietary connectors and partner APIs.

Supplier risk management isn't a one-time project, but rather a process requiring ongoing investment. You can manage it yourself, using our data and tools to empower your business objectives. Or you can work with our supplier specialists, who can help you address the remediation and ongoing management of your supplier portfolio. Learn how our data and unifying analytical tools and interfaces can help you find the right solution quickly, so you can better manage risks in your supplier portfolio.

No matter where you are on your supplier risk management journey, we can help.
